

Fabros, Kishi Rameah O.
BSIS - 3A
IS Elective 2

Activity # 1 | CODE

```
words = []

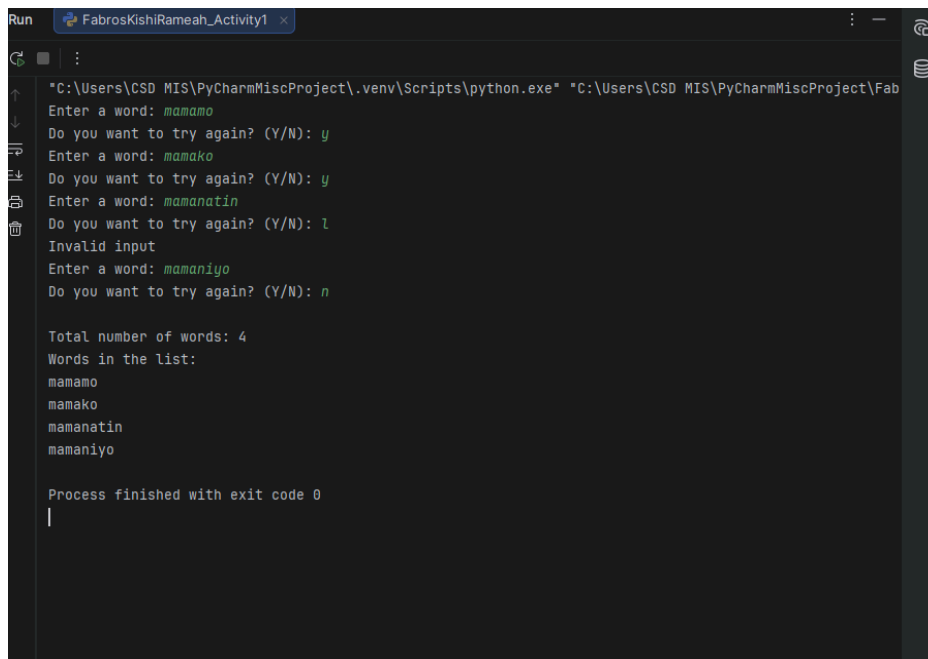

while True:
    word = input("Enter a word: ")
    words.append(word)

    answer = input("Do you want to try again? (Y/N): ")

    if answer.lower() == "n":
        break
    elif answer.lower() == "y":
        continue
    else:
        print("Invalid input")

print("\nTotal number of words:", len(words))
print("Words in the list:")

for w in words:
    print(w)
```

A screenshot of a terminal window titled "Run" with a tab "FabrosKishiRameah_Activity1". The terminal shows the execution of a Python script. The script prompts the user to enter words and whether they want to try again. The user enters "mamamo", "mamako", "mamanatin", and "mamaniyo". The script then prints the total number of words (4) and lists them. The process finishes with exit code 0.

```
Run FabrosKishiRameah_Activity1 x
"C:\Users\CSD MIS\PyCharmMiscProject\.venv\Scripts\python.exe" "C:\Users\CSD MIS\PyCharmMiscProject\Fab
Enter a word: mamamo
Do you want to try again? (Y/N): y
Enter a word: mamako
Do you want to try again? (Y/N): y
Enter a word: mamanatin
Do you want to try again? (Y/N): l
Invalid input
Enter a word: mamaniyo
Do you want to try again? (Y/N): n

Total number of words: 4
Words in the list:
mamamo
mamako
mamanatin
mamaniyo

Process finished with exit code 0
|
```

Activity # 2 | CODE

```
records = {}

while True:
    print("\nChoose an option:")
    print("a. Add Data")
    print("b. Delete Data")
    print("c. End")

    choice = input("Enter choice: ")

    if choice.lower() == "a":
        key = input("Enter Key (Category): ")
        value = input("Enter Value (Value): ")

        records[key] = value

        print("\nResult:")
        for k, v in records.items():
            print(k + ":", v)

    elif choice.lower() == "b":

        if key in records:
            del records[key]
            print("\nData removed.")
        else:
            print("Key not found.")

        print("\nResult:")
        for k, v in records.items():
            print(k + ":", v)

    elif choice.lower() == "c":
        print("THANK YOU")
        break

    else:
```

```
print("Invalid choice.")
```

```
Run FabrosKishiRameah_Activity2 x
"C:\Users\CSD MIS\PyCharmMiscProject\.venv\Scripts\python.exe" "C:\Users\CSD MIS\PyCharmMiscProject\Fab

Choose an option:
a. Add Data
b. Delete Data
c. End
Enter choice: a
Enter Key (Category): fruits
Enter Value (Value): banana

Result:
fruits: banana

Choose an option:
a. Add Data
b. Delete Data
c. End
Enter choice: a
Enter Key (Category): vegetable
Enter Value (Value): cabbage

Result:
fruits: banana
vegetable: cabbage

Choose an option:
a. Add Data
b. Delete Data
c. End
Enter choice: a
Enter Key (Category): candy
Enter Value (Value): monami

Result:
fruits: banana
vegetable: cabbage
candy: monami
```

```
Run FabrosKishiRameah_Activity2 x
Choose an option:
a. Add Data
b. Delete Data
c. End
Enter choice: a
Enter Key (Category): chocolate
Enter Value (Value): hersheys

Result:
fruits: banana
vegetable: cabbage
candy: monami
chocolate: hersheys

Choose an option:
a. Add Data
b. Delete Data
c. End
Enter choice: b
Enter Key to delete (Category): vegetable

Data removed.

Result:
fruits: banana
candy: monami
chocolate: hersheys

Choose an option:
a. Add Data
b. Delete Data
c. End
Enter choice: c
THANK YOU

Process finished with exit code 0
